8 **Abstract:** Writing manuscripts doesn't have to be awful. This template *tries* to provide good
9 defaults for both the draft and preprint modes. Most of the information is contained in the YAML
10 file.

11 **Keywords:** markdown pandoc LaTeX

12 **Date:** Work in progress.

13 And that's it. The **YAML** header is supposed to be complete, you only need to edit it. More
14 goodness will come soon.

15 1 Critic Markup

16 These also show the different ways to have *CriticMarkup* show up in the rendered document.
17 For each author, you can define an `id` in the **YAML** header. *CriticMarkup* prefixed with this
18 `id` (no space), as in this example, will be marked differently.

19 1.1 Feature demo

20 The following lines should be highlighted in **draft**, but not in **preprint** mode. With the
21 exception of the highlights, which are always shown.

- 22 • addition ^{tp:}with an author name
- 23 • ~~deletion~~ ^{sa:}~~with an author name~~
- 24 • ^{tp:}~~replacement~~with author name
- 25 • this sentence [has an annotation]
- 26 • ^{sa:}this sentence [has a signed annotation]
- 27 • highlight only, and a **tp** signed highlight
- 28 • [note only], and a ^{tp:} [signed note]

50 2 Other features

51 2.1 Citations

52 By default, the template will look for citations in the `refs.bib` file (see the YAML header), but
53 any format recognized by pandoc will work. The default format is `vancouver-author-year.csl`.
54 This allows you to, well, cite papers (Hutchinson 1959).

55 2.2 Figures

56 By default, figures are rendered at the end of the document, with each figure taking up a
57 whole page. There is a table of figures. It is recommended to use `autoref` to cite figures:
58 Figure 1.

59 In the `preprint` mode, figures are displayed in text. The syntax to specify where a figure
60 should appear is `!{figureid}`, no space, on a single line. Note that this is *not* standard
61 markdown.

62 If you want full width figures, in the `yaml`, just add `wide: true`. This will only be noticeable
63 in the `preprint` mode.

64 2.3 Tables

65 *Coming soon.*

66 2.4 Code

67 Of course the nice thing with using `markdown` is that code highlighting just works out of the
68 box.

```
A = rand((1000, 1000))  
  
@times A * A
```
